ConDePhase® Plus Instructions

To size the super capacity ConDePhase Plus unit for your particular application, first select the correct chart for the ISO viscosity grade of the lubricant being used in the air compressor. 1. Locate the compressor capacity on the vertical scale at the left hand side of the graph. 2. From this point travel horizontally to the right unitl you intersect the line representing the base stock of the lubricant being used in the compressor. 3. At this intersection, travel vertically downward to the bottom scale indicating the recommended unit size.

NOTE: If you arrive at a point on the scale that indicates the maximum capability of the unit...it is advised to recommend the next larger size unit. In the sample to the right, a ConDePhase® Plus
